FOR DECK STEPS AND WALKWAYS

Suredeck has been formulated using durable 2-part epoxy resins and silica granules to produce a very hardwearing grip strip which bonds permanently to any type of timber decking.

Suredeck can be applied to decks already in place or pre-formed in hardwood or softwood deckboard for a variety of projects.

inlaid grip strips

Suredeck is available in a variety of colours and can be mixed to a precise colour match for large quantities.

The standard colours that are available are: neutral, black, red, yellow and blue

It can be inlaid for heavy commercial use or surface applied for light commercial and residential use.

army accommodation

The standard product is a treated softwood with an anti-slip gripstrip down the middle of the wood, usually 50mm wide so that when the boards are laid you hit a section every step.

This product works best in a 33mm x 120mm prime grade treated softwood board and is priced per metre length, including the board, excl. VAT and ex-works. The gapping on the board is generally between 5-10mm so the number of boards per m² is calculated at 8. The price, therefore, per m² would be m rate x 8.

We offer a cutting facility which is very popular as the material, once inlaid into the board, cannot be cut with conventional saws. The price is approximately .50p per cut, but the material is charged at the next standard rate.

For example :
3.252m is charged at 3.6m and would be one cut at .50p
1.262m x 2 is charged at 3.0m and would be two cuts at .50p

The standard lengths are 3m, 3.6m, 4.2m and periodically 4.8m when it is available.

Suredeck is also available in small DIY containers for residential applications.

Each container will approximately cover 20 linear metres of standard 50mm Suredeck application.

Container price is £41.75 inc Vat plus postage and packing.
